

**IN THE CLAIMS:**

Cancel claims 1-13 and add claims 14-17.

1-13. (Canceled).

14. (New). Disposable aid for urination having a folded drain member (21) which is formed of walls which lie flat against each other of a hygiene paper, by folding along a central line (42) and which bound a drain channel provided with a wetting inhibiting layer (18), said drain member (21) including an inlet section (22) which can be formed into a funnel for the reception of urine, a drain section (23) for the draining of urine into a toilet, and a sideways projecting holding part (24), characterized in that the inlet sections (22) is formed of a first wall with two wall sections (26) which are made in one piece with the drain sections (23), and of a second wall with two wall sections (27) connected, respectively, with the two wall sections (26) of the first wall, and in that the holding part (24) is formed of two sections connected, respectively, with the two wall sections (27) of the second wall and is surrounded by the wall sections (26, 27) of the first and second walls, the holding part (24) projecting beyond the folded wall sections (26, 27) by a distance that insures automatic opening of the inlet section (22) upon pivoting of the holding part (24).

15. (New). Aid in according with claim 14, characterized in that the wall sections of the drain section (23) are at least partly connected to one another in an edge region.

16. (New). Aid in accordance with claim 14, characterized in that the drain member (21) is formed of a first cut blank (30).

17. (New). Aid in accordance with claim 14, characterized in that the drain member (21) is formed of first, second and third cut blank (51, 54, 56).
